MADAD Group Engineering is an American-Egyptian engineering office established for the purpose of providing added value technical services to End customers, Suppliers & Contractors to support their regional business by providing Detailed Engineering, Specific Technical Expertise, Projects Construction & Commissioning, Technical Assistance, Execution of Warranty and Maintenance Contracts, Local Manufacture of Specialized equipment & Others

With the increasing cost of project execution, more and more businesses are shifting to the model of project staff loading & unloading based on needs, while maintaining all material and equipment acquisition in-house to maximize their profit.

MADAD Group is a world class leading establishment that specializes in providing technical personnel solutions and project management.

Based in Cairo, Egypt. MADAD Group has immediate access to the abundant highly technical and qualified people available that can bring success to your project and business.

We are not just another man-power provider. Although we can certainly provide you with your needs of craft man power that are –not only- well trained but experienced as well. We like to think of our selves as partners to your business.

Your success is our success. That is why we back our work-force with highly experienced and internationally certified management to help stream line the decision making process and problem resolution. When our staff identifies a problem they will report it to you and –in

addition- suggest the best solution or action as well.

Madad Group Engineering is an International Member of NETA (National Electric Testing Association) which is an ANSI standard making organization. A Full Member of NETA is a full-service, third-party, independent testing firm that must certify its technicians through uniform testing standards, maintain a calibration accuracy program, and work with a registered Professional Electrical Engineer to review short-circuit and over-current coordination studies.

As an independent firm with more than 20-years of collective experience in electrical maintenance testing, acceptance testing, certification, approvals and engineering evaluations of electrical distribution equipment, MADAD Group continues to service major industrial, commercial and institutional clients' low to extremely-high voltage testing and maintenance.

With large names in the industry like ABB, Schneider & Siemens as our clients and partners, no job is too big or too small. We will give you the attention that you deserve. All and every client receives our full attention and support. From the smallest control panel design-build job to a full scale commissioning of an entire power plant project, we will always strive for your satisfaction.
